

**Flood Warning: York River****Flood Watch: Little Mississippi River****Watershed Conditions Statement - Flood Outlook:  
Remainder of Bancroft District****NEWS**

Monday, April 30, 2018

**3:30pm**

The Ministry of Natural Resources and Forestry - Bancroft District is advising area residents that a Flood Warning remains in effect for the York River but has been downgraded for the Burnt River, Irondale River, and Black River. A Flood Watch remains in effect for the Little Mississippi River watershed. A Watershed Conditions Statement – Flood Outlook remains in effect for the remainder of Bancroft District.

Residents of Bancroft District should keep a close watch on conditions, regularly check for updated messages and exercise caution near fast-moving rivers and streams. Please alert any children under your care to these dangers and supervise their activities. Residents who have a historic susceptibility to flooding should take appropriate precautions to protect their property, such as ensuring sump pumps are functioning and securing items that may float away as water levels rise.

MNRF is closely monitoring the weather and developing watershed conditions. Further updates will be issued as appropriate.

**TECHNICAL INFORMATION*****Description of Weather System***

This message is being sent on the basis of information received from MNRF - Surface Water Monitoring Centre, MNRF - Aviation Forest Fire and Emergency Management Services, Trent Severn Waterway and Environment Canada and observed local conditions.

The 5 day forecast suggests precipitation in the 20-30mm range associated with a low pressure system moving into our area. Forecast daytime temperatures range from 14 to 20°C with nighttime temperatures ranging from 0 to 5 °C.

**Description of Current Conditions**

Most lakes still remain at or below average for this time of year but significant increases are anticipated. Lake levels are monitored daily and assessed in relation to estimated runoff

amounts. The snow pack has diminished in many locations but remains higher than average for this time of year where it remains in the upper reaches of our watersheds. The levels and flows are subject to a rapid rate of increase driven by the amount of remaining snow and rainfall received and forecast.

The flows on **Burnt River**, **Irondale River** and **Black River** remain high and above average for this time of year, but have crested and are declining. The forecasted rainfall will either level off or cause the flows to increase again.

**Gull River** reservoir lakes for the most part continue to increase as the remaining snow melts and will continue this trend with the expected rainfall later this week.

Flows on the **York River** and **Little Mississippi River** are high following last week's rain and continued snowmelt. Properties within the floodway will continue to be impacted by flood waters.

Due to mostly frozen conditions, the ground's ability to absorb runoff and snowmelt is limited. The potential exists for nuisance flooding of roadways, ditches, and low lying flood prone areas as the melt progresses. There may be potential for minor ice jam related flooding on some rivers.

A close watch on local forecasts and conditions is recommended.

The MNRF and the Trent-Severn Waterway (TSW) continue to closely monitor local lakes and rivers as the freshet progresses.

The MNRF is in regular communication with partner agencies and water control structure operators, including Conservation Authorities, Ontario Power Generation (OPG), Bracebridge Generation and the TSW.

**Expiry Date:**

This message will expire on 05/04/2018 11:59 PM

**Terminology: Notification Levels**

WATERSHED CONDITIONS STATEMENT – WATER SAFETY: indicates that high flows, melting ice or other factors could be dangerous for such users as boaters, anglers and swimmers but flooding is not expected

WATERSHED CONDITIONS STATEMENT – FLOOD OUTLOOK: gives early notice of the potential for flooding based on weather forecasts calling for heavy rain, snow melt, high winds or other conditions

FLOOD WATCH: potential for flooding exists within specific watercourses and municipalities

FLOOD WARNING: flooding is imminent or occurring within specific watercourses and municipalities
